

Bay-2 BOM Risk Check

The Bay-2 Risk Analysis for multi-level BOMs takes essential parameters into account to strengthen your planning security:

- Complexity
- Planned Delivery Time
- EOL (End of Life)
- Number of Manufacturers
- Coverage

This approach reduces total risk and ensures future-proof planning.

Bay-2 BOM Compliance Check

The Compliance Check verifies daily that your BOMs consistently meet the latest legal and regulatory requirements. With a structured overview, we support you in minimizing risks and ensuring compliance with all relevant regulations.

How to Achieve Proactive Lifecycle
and Sourcing Management (DE)

Bay-2 Best-Price Engine

The integrated Best-Price Engine accesses distributor data via API. Prices and availability are researched and imported in real time.

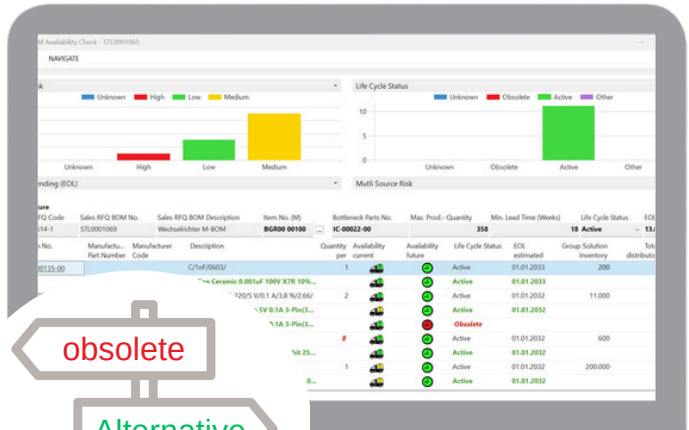

- Daily Updated Customer-Specific Prices and Inventory
- Price Scale Matrix
- Graphical representation of price and inventory development
- Interface to ERP price database
- Automatic API Updates for Available Stock of Missing Parts

Bay-2 Obsolescence and Lifecycle Check

The proactive Bay-2 analysis monitors critical factors such as:

- Internal Inventory
- Current and Future Availability
- Lifecycle Status

Additionally, the analysis of parts usage and integration of second sources ensures alternative supply options are always available, keeping the production process stable
